D2L-MS Teams Integration and EU General Data Protections Regulations (GDPR)
Last updated: January 1, 2021

ShuffleExchange™ is an integration Platform as a Service (iPaaS). As an iPaaS, ShuffleExchange connects two or more data management applications to transfer the data between applications. As an integration platform, ShuffleExchange is a pass-through application and does not retain personally identifiable information or other data points like IP addresses. As applicable to EMEA, ShuffleExchange is GDPR compliant if and where necessary.

ShuffleExchange processes only minimal data absolutely necessary for the completion of fulfillment of professional duties, services (i.e., data minimization), and the clients' requirements. There is limited and secure access to personal data, the extent of the processing of that personal data, the period of storage and its accessibility.
